

DSI 8 – PROJECT 1

EDA and Data Wrangling for
SAT and ACT scores, 2017 - 2018

By Group 3:

Justin Tan, Chang Chu Hua, Alfred Tang

DSI 8, General Assembly

23 May 2019

INTRODUCTION

- ▶ SAT format changed in 2016
 - ▶ Now there are 2 years of data to compare, post-change
 - ▶ Task: Analyse data and present findings to College Board staff
- 
- A series of three parallel white diagonal lines in the bottom right corner of the slide.

PROBLEM STATEMENT

- ▶ In which states are participation rates increasing after re-design of SAT?
 - ▶ Are more students achieving the benchmark scores after the re-design?
- 
- A series of three parallel white diagonal lines in the bottom right corner of the slide.

DATA CLEANING (2017)

► Issues:

- Row counts not matching
 - ACT 2017 National Composite

► Typos

- SAT 2017 Maryland Math Score → 52 instead of 524

DATA CLEANING (2017)

► Issues (Cont'd):

► Data Entry

- ACT 2017 Wyoming Composite → 20.2x
- ACT 2017 Maryland Science → 2.3 → 23.2

► Data Types

- Participation entered as strings
 - Replaced % with blank; converted to float

DATA GATHERING (2018)

► Issues:

- Source Data not complete
 - Composite column was the only usable column
 - Separately gathered score data
- Data not matching
 - SAT scores did not match Totals
 - +1/-1 differences ignored.
 - Difference is due to rounding
 - Officially stated by College Board.

DATA CLEANING (2018)

► Issues:

► Row counts not matching

- 2018 National averages

► Data Types

- Participation again entered as strings

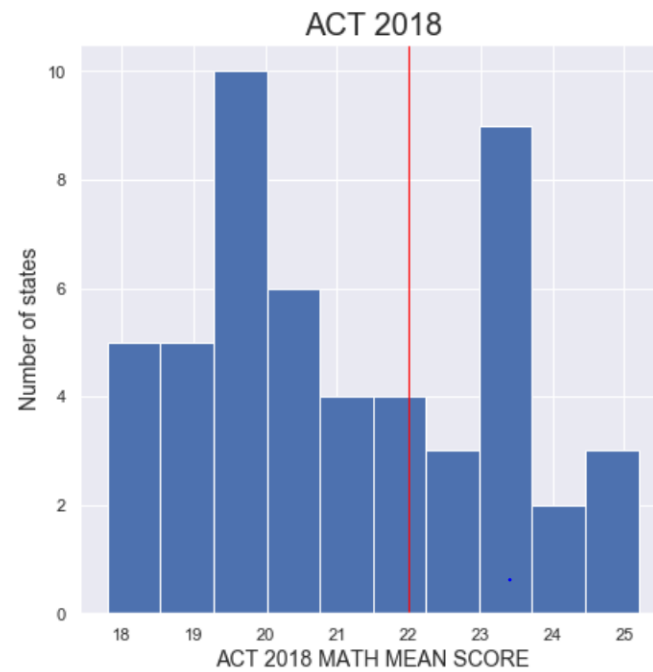

EDA: SUMMARY STATISTICS

| | count | mean | std | min | 25% | 50% | 75% | max |
|------------------------|-------|-------------|-----------|--------|----------|---------|----------|--------|
| sat_2017_participation | 51.0 | 0.398039 | 0.352766 | 0.02 | 0.040 | 0.38 | 0.660 | 1.0 |
| sat_2017_erw | 51.0 | 569.117647 | 45.666901 | 482.00 | 533.500 | 559.00 | 613.000 | 644.0 |

SCORES VS TEST PARTICIPATION

► Benchmarks

- Many states do not meet the ACT benchmarks or SAT Benchmarks for each test.
 - Most state mean SAT Total scores are at or above the national mean.
 - Approximately half of all ACT state mean composite scores are at or above the national benchmark.
 - As participation levels increase, mean Total and Composite scores decrease.
- 
- Several white lines of varying lengths and angles are positioned in the bottom right corner of the slide, creating a modern, abstract graphic element.

SCORES VS TEST PARTICIPATION

▶ Participation

- ▶ Numerous states have full participation in the ACTs and SATs.
 - ▶ More "normal" results are included where all students participate in the tests, thus lowering the state averages
 - ▶ Most states with high mean scores have low participation rates.
- 
- Several white lines of varying lengths and slopes are positioned in the bottom right corner of the slide, creating a modern, abstract graphic element.

RELATIONSHIP: SAT & ACT PARTICIPATION

- ▶ It could be a justifiable comparison because:
 - ▶ Same kind of metric
 - ▶ Participation for test used in college admissions
 - ▶ Exactly the same scale (0.00 to 1.00)
 - ▶ It is possible to establish a reasonably accurate correlation value.
- 
- Several white lines of varying lengths and slopes are positioned in the bottom right corner of the slide, creating a modern, abstract graphic element.

RELATIONSHIP: SAT & ACT PARTICIPATION

- ▶ However, without additional data, further issues can crop up.
- ▶ Issues:
 - ▶ They are not entirely independent variables.
 - ▶ Test participation rules and incentives vary across the states
 - ▶ Geography influences test participation
 - ▶ Each is a major exam that can be used for college admission
 - ▶ Taking one test likely means not taking the other
 - ▶ SATs are more recognised for university admissions worldwide

RELATIONSHIP: SAT & ACT PARTICIPATION

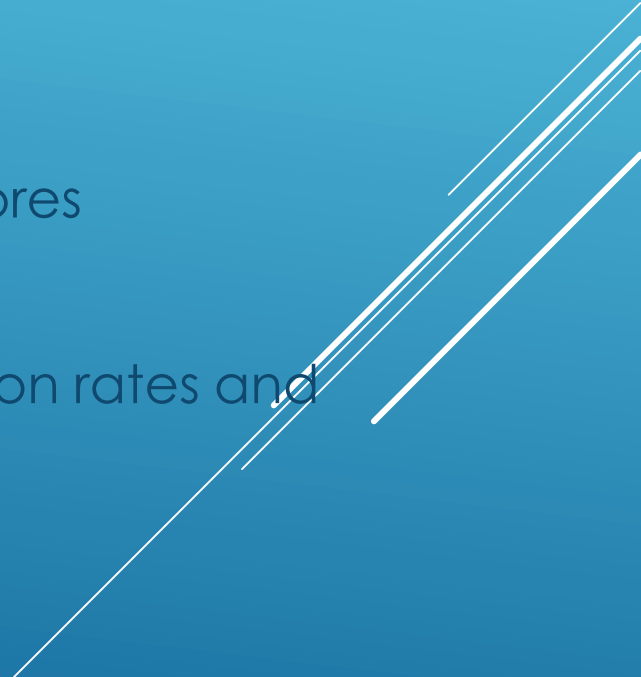

- ▶ Issues (Cont'd):
 - ▶ Populations of each state are not reflected alongside participation data.
 - ▶ Some states, such as Florida, have high populations (147,058 students).
 - ▶ High population more likely to drastically lower mean scores than for a less populous state
 - ▶ 147,058 students in Florida vs. 14,834 students in Rhode Island
 - ▶ SAT and ACT participation have a strong negative correlation with each other (approx. -0.8)

RELATIONSHIP: SAT & ACT PARTICIPATION

Source: <https://www.edweek.org/ew/articles/2018/10/31/sat-scores-rise-as-number-of-test-takers.html>

RELATIONSHIP: SAT & ACT PARTICIPATION

- ▶ From participation rates, it is not immediately obvious how many students took any test
 - ▶ Participation rates alone do not fully explain changes in mean scores
 - ▶ The number of students taking the test gives context to participation rates and changes in scores.
- 
- Several white lines of varying lengths and slopes are positioned in the bottom right corner of the slide, creating a modern, abstract graphic element.

IMPACT OF CHANGE: PARTICIPATION

IMPACT OF CHANGE: MATHEMATICS

IMPACT OF CHANGE: TOTAL AND COMPOSITE

STATES TO WATCH

- ▶ Illinois
 - ▶ Colorado
 - ▶ Alaska
- 
- A series of four parallel white lines of varying lengths, slanted diagonally upwards from left to right, located in the bottom right corner of the slide.

STATES TO WATCH

▶ Illinois

- ▶ State government of Illinois made the SATs compulsory and started phasing out the ACT in 2016
- ▶ Students were strongly incentivised:
 - ▶ State sponsorship
 - ▶ Tested at taker's convenience

STATES TO WATCH

► Colorado

- ▶ Similar to Illinois, the state of Colorado signed a contract with the College Board to adopt and push the SAT in 2016.
- ▶ Students were strongly incentivised:
 - ▶ State sponsorship
 - ▶ High convenience

STATES TO WATCH

▶ Alaska

- ▶ Saw a large drop in ACT participation rates because the ACT was "losing ground" nationwide.

STATES TO WATCH

- ▶ Interesting observations:
 - ▶ All 3 states saw sharp dips in ACT participation
 - ▶ All 3 states saw the largest increases in mean scores for the ACTs
- ▶ This supports the idea that, to an extent:
 - ▶ Increased participation lowers overall means scores and
 - ▶ Decreased participation raises overall mean scores

CONCLUSION

- ▶ Changes to SAT test structure have had a major impact on the US education system.
 - ▶ Whether it is positive and long-lasting is inconclusive for now.
 - ▶ More samples are required for accurate predictions.
- 
- Several white lines of varying lengths and slopes are positioned in the bottom right corner of the slide, creating a modern, abstract graphic element.

RECOMMENDATIONS TO COLLEGE BOARD

- ▶ Continue reviewing how the new SAT format affects participation levels and test scores.
 - ▶ More data required to make more conclusive analysis
 - ▶ Factor in student populations (absolute numbers) in data to give context to participation levels
 - ▶ To ensure future dominance, ensure higher adoption of SAT now
 - ▶ Obtain more government contracts for delivery of SAT exams
- 

ONE STATE TO LOOK OUT FOR

▶ District of Columbia

- ▶ DC's SAT participation rate saw a decrease with no perceptible corresponding increase in ACT participation rates.
- ▶ Possible that DC students may be taking alternative tests such as the ACT and PARCC.
- ▶ College Board could try negotiating with private colleges to offer more incentives to take SAT:
 - ▶ More scholarship money
 - ▶ Better perks
 - ▶ Prestige

KEY TAKEAWAYS

- ▶ Data loses its meaning without context.
 - ▶ Research can explain numbers, but numbers cannot tell a story by themselves.
 - ▶ EDA helps you understand your data and what areas to research in order to make your analysis more accurate.
 - ▶ The more similar the dependent variables of two datasets, the more equitable the comparison.
 - ▶ Craft a good problem statement:
 - ▶ Essential for effective and efficient execution of EDA.
- 
- Several white lines of varying lengths and slopes are positioned on the right side of the slide, extending from the middle to the bottom right corner.

QUESTIONS?

THANK YOU!
